

Guidance for Implementation of Nonroad Idling Rule

Frequently Asked Questions about Idling

Why is it important to reduce idling?

Unnecessary idling results in the emission of many air pollutants that are harmful to human health, wastes fuel, and increased maintenance requirements for all types of vehicles. Modern diesel equipment does not need to idle for more than [3-5] minutes to warm up, unless specifically instructed otherwise by the equipment manufacturer.

Formatted: Justified

Wouldn't the continual shutting off and turning on of diesel engines actually damage the engine and emit more soot than idling?

Shutting off and turning on the engine will not result in engine damage or increased wear as long as the engine manufacturer's recommendations regarding warm-up and cool-down time are followed.¹ Additionally, emissions of all pollutants generally will be reduced by eliminating unnecessary idling.

Formatted: Justified, Don't adjust space between Latin and Asian text

Isn't it bad to operate a cold engine if it hasn't been warmed up?

Generally engines do not require an extensive amount of time to warm-up, though you should consult vehicle/equipment operating manual to determine necessary warm-up times. Running equipment cuts warm-up times in half.

Summary of Nonroad Idling Regulation

[STATE AQ DEPT] places a limit on unnecessary idling of nonroad diesel equipment as the result of the adoption of [REG #]. The regulation states: "No person, entity, owner, or operator shall cause or allow the idling of Nonroad diesel equipment under its control or on its property for more than [3-5] consecutive minutes." This limit applies to all nonroad diesel equipment subject to the regulation, unless the piece of equipment is exempt or idling for specific circumstances defined in the regulation. The idling limits are effective and enforceable as of [EFFECTIVE DATE], when the regulation became effective under [STATE] law. This document provides additional information on the idling limits.

Who may be held responsible for idling violations? (AGC-NJ - This will depend upon the statutory authority under which the model rule is adopted in each state. Under NJ law, for example, the company leasing equipment to a contractor could not be held liable for an idling violation.)

OTC Model Rule: Guidance for Implementation of Nonroad Idling Rule

5.04.2011 draft

- Person, entity, owner, or operator of a property or location where the equipment is operated. (AGC-NJ – The property owner will often be the State of NJ itself, or another state or local government entity.)
- Owners and operators of the equipment.
- (AGC-NJ - This is beyond the NJDEP's statutory authority in NJ and is probably unlawful in other jurisdictions as well.) The permit holder for the activity for which the equipment is being operated.

Deleted: If the equipment is leased, the lessee of the equipment.

Deleted: ¶

Can multiple parties be held responsible for an idling violation?

Parties are jointly and severally liable for violations, meaning multiple parties can be held liable for the same violation. (AGC-NJ - Whether or not a person can be jointly and severally liable for a violation of the idling rule will depend upon the specific statutory authority under which the model rule is adopted in each state.)

What types of equipment are exempt from the regulation?

- Locomotives with genset or conventional engines
- Marine engines
- Recreational vehicles
- Farming equipment
- Military equipment when it is being used during training exercises, emergency or public safety situations
- Equipment that is not being operated for compensation (e.g. a homeowner using his own backhoe to dig out a pool on his/her property).

When is idling for more than [3-5] minutes allowed?

The purpose of the idling limitations is to prevent idling when it is not necessary, and is not intended to limit the functions of a vehicle or business. (AGC of NJ – this comment is anecdotal and not appropriate for a guidance document). Unnecessary idling can be eliminated and result in significant fuel savings and reduced wear and tear on equipment.

Deleted: A large portion of idling is unnecessary and is the result of personal habit.

Formatted: Font color: Red

Formatted: Font color: Red

Deleted: This unnecessary

The regulation explicitly grants exemptions to the idling limit for the following cases, [and will consider other circumstances on a case-by-case basis?]:

- Idling is allowed when necessary to meet specifications of the manufacturer's operating manual or other applicable technical document.

Note: parties are responsible for providing the manufacturer's operating manual to demonstrate the need for idling times. (AGC-NJ – parties are not liable until after the AQ agency determines that a violations has occurred, presumably exceptions would be asserted and/or recognized prior to any determination of liability. Provided to whom? Longer than what? We suggest this be re-written to say that the AQ agency may require that a nonroad equipment owner or operator

Deleted: *liable*

Deleted: *longer*

produce the manufacturers operating manual to demonstrate that the engine/equipment is warmed up or otherwise operated in accordance therewith.

- Idling is allowed to ensure the safe operation of the equipment.

Includes idling for defogging/deicing, operating safety lights, and/or to verifying that the equipment is in good working order.

- Idling is allowed to ensure the health and safety of the equipment operators (AGC-NJ – This is not in the model rule and we don't see an exemption in the rule from which this exemption in the guidance clearly derives. The Guidance document may explain, amplify or interpret the rule, but it would be unlawful to add exemptions or impose obligations that are not expressed in the rule.)

Enforcement personnel will have the discretion to determine when idling is necessary to provide heating or air conditioning to ensure the health and safety of the operators. Ordinarily, idling is not necessary to provide heating or air conditioning to ensure the health and safety of the operators when temperatures are within 25°F & 85°F. Additionally, idling is not necessary to provide heating or air conditioning to ensure the health and safety of the operators when APUs are installed for temperature control purposes.

(AGC-NJ – As noted above, the guidance document cannot lawfully establish exemptions or impose obligations that are not derived from the model rule text. Here, the guidance seeks to establish an exemption that is not in the rule, and then limit its applicability (e.g., when temperatures are below 25F and above 85F. The suggested revised text is an appropriate interpretation of the rule.)

- Idling is allowed for testing, servicing, repairing, or diagnostic purposes, including regeneration of a diesel particulate filter.

*Note: The exemption for diesel particulate filters does not apply to equipment that uses a filter that does **not** require regeneration in order to function properly.*

- (AGC-NJ – This needs to be re-written to clarify that this is not an exemption; rather, whenever equipment is performing a function for which it is designed, it is not idling, and there is no need to exempt it from otherwise prohibited activity. See suggested text below.)

- Idling is allowed when waiting for a state or federal inspection to verify that all equipment is in good working order, if idling is required as part of the inspection.

Deleted: make exceptions to the idling limitations

Deleted: W

Deleted: no exemptions will be allowed

Deleted: units with installed

Deleted: will not be exempted at any temperature

Deleted: Idling is allowed as part of a prescribed mechanical or electrical operation

Deleted: .

Formatted: Justified, Indent: Left: 18 pt

Deleted: Examples: operating a crane, operating a cement mixer when necessary to provide concrete agitation, cherry picker, fuel pump operation, powering hydraulic systems, boom lift or transporting property while the property is being loaded and unloaded. Asphalt trucks that have a separate power source that provides the heat necessary to treat the asphalt do not qualify for this exemption (i.e., asphalt trucks that use exhaust gas to "warm" the asphalt in the bed of the truck are not exempt from the idling limits. Idling is allowed for less than fifteen (15) minutes when queuing.

This does not include the time an operator may wait motionless in line in anticipation of the start of a workday or opening of a location where work or a service will be performed. ¶

OTC Model Rule: Guidance for Implementation of Nonroad Idling Rule

5.04.2011 draft

- Idling is allowed when a vehicles is being used for emergencies or the public safety, such as utility service restoration that requires emergency warning lights or other mechanical functions.

(AGC-NJ) What is Idling?

Formatted: Font: Bold

Idling means, "for purposes of a nonroad diesel engine, that the engine is running while the nonroad equipment is not moving and is not performing any other function for which it was designed." Accordingly, whenever equipment is either moving or performing a function for which it is designed, it is not idling. Examples include:

Formatted: Font: Not Bold

- Operating a crane, operating a cement mixer when necessary to provide concrete agitation, cherry picker, fuel pump operation, powering hydraulic systems, boom lift or transporting property while the property is being loaded and unloaded.
- Asphalt trucks that have a separate power source that provides the heat necessary to treat the asphalt do not qualify for this exemption (i.e., asphalt trucks that use exhaust gas to "warm" the asphalt in the bed of the truck are not exempt from the idling limits.
- This does not include the time an operator may wait motionless in line in anticipation of the start of a workday or opening of a location where work or a service will be performed.

Is idling allowed for generators or Tier 4 engines?

Formatted: Font: Not Bold

The idling limitations were put into effect to limit the levels of pollution produced by preventing idling when it is not necessary. The regulation does not grant exemptions for the following cases:

- Tier 4 engines are subject to the [3-5] minute idling limit. Although Tier 4 engines are cleaner, there is no reason to idle **any** engine unnecessarily.
- Stationary generators may need air permits pursuant to [other state regulation] and their operation is not covered by this regulation.

Is idling allowed for onroad vehicles?

Idling of onroad vehicles is regulated by [STATE] as well. The related regulations can be found in:

- [Other state regulation] for onroad engines powered by fuels other than diesel.

OTC Model Rule: Guidance for Implementation of Nonroad Idling Rule

5.04.2011 draft

- [Other state regulation] for onroad diesel engines traveling to a site.
- [This regulation | Other state regulation] for onroad diesel engines working on a site.

Is a company idling policy necessary?

While the regulation does not require a written idling policy, [STATE AQ DEPT] does recommend that owners and operators of nonroad diesel equipment have a written idling policy in order to keep employees informed about the rule. By having a written company idling policy it will be easier for a company to ensure that employees do not violate anti-idling regulations.

How Can Individual Pieces Of Nonroad Equipment Be Identified?

Information on how to identify types of nonroad diesel equipment or locate serial numbers on nonroad diesel equipment can be found on EPA's website: <http://epa.gov/cleandiesel/documents/420b10025.pdf>.
