

## Addendum

### Charge to the Stationary and Area Sources Committee to Pursue Potential Strategies for Regional Attainment of the 2008 and 2015 Ozone National Ambient Air Quality Standards

The Ozone Transport Commission (OTC) directs the Executive Staff and the OTC Stationary and Area Sources Committee to perform technical analysis to assist OTC states in developing cost-effective strategies to reduce ozone-forming pollutants as required by the Clean Air Act. The analysis of potential strategies identified below for consideration and action by the OTC is to be completed and presented to the Air Directors by the 2018 Fall OTC Air Directors' Meeting.

The technical analysis provided by the SAS Committee will include:

- Information from the separate analyses recently conducted by CT, DE, MD, ME, and NJ on high emitting electric generating units (EGUs) on high ozone days to further inform the development of cost-effective strategies.
- Data needed to perform episodic modeling run(s) on the impact of 2017 daily NOx emissions from EGUs of 15 MW or greater capacity that report to the U.S. EPA's Clean Air Markets Division (CAMD/AMPD) database and that are located within the states covered by the Cross-State Air Pollution Rule Update (CSAPRU) and the OTC States.
- An evaluation of a new cost effectiveness metric based on the ratio of the Daily Emissions Reduction (tons/day) to the Annualized Cost (in Million \$).

Approved by the Commission on June 7, 2018
