

Regulatory Incentive: Existing

- Relax/ Release permit constraints for LEU's
 - Hours of operation or heat input
 - Fuels utilization
- Incentivise LEU's to run beyond current constraints
 - HEU is idle, delta in NOx allowances from set asides
 - Incentivise smaller (<25MW/ Industrial) HEU to idle
- Construct SIP arguments to support the above

Regulatory Incentive: Development

- Redefine/ restructure regulatory impediments to new LEU development
 - Very clean to ultra clean reconsideration in light of ultra high cost
 - Localize regulatory siting requirements to fuels availability
 - Incentivise change out (actual or contractual) of smaller (<25MW/ Industrial) HEU for LEU power
