Recent TSC Activities, Comments on SIP Actions

Our comments on RH SIPs – HI, IL, OK, RI, AK, NV, TN:

- Oppose EPA's new URP policy for demonstrating reasonable progress
- Oppose EPA's Feb 20, 2026 guidance update dictating that grid reliability be taken into account when evaluating the statutory energy factor

Recent TSC Activities, Comments on the RHR ANPRM

Our comments on the RHR ANPRM:

- Oppose the URP policy and reaffirm the use of RPGs
- Support the continued use of the 20% MID and 20% Clearest Days metrics
- Reaffirm the use of natural conditions as the RHR end goal
- Generally oppose any sort of “safe harbor” approach, but suggest that some SIP requirements could be suspended if monitored haze indexes below RPGs

Recent TSC Activities, Comments on the RHR ANPRM

Our comments on the RHR ANPRM (cont'd):

- Reaffirm the importance of IMPROVE
- Support the continued use of the 10-year planning period
- Support the continued requirement of a 5-year PR, but suggest that some SIP and PR requirements are redundant and could be streamlined
- Reaffirm the importance of the RPOs
- Express concern with recent SIP actions and how they might frame potential RHR changes

Future TSC Focus Areas

- When they become available, review proposed RHR updates and provide comment
- Update training materials and SIP/PR templates to accommodate RHR changes
- Work with other OTC committees, other RPOs, and EPA, as appropriate, to push for robust future-year inventories and modeling
- Promote consistency in modeling and other techniques for determining contribution to Class I areas
