Meeting Announcement and Invitation

2022 Ozone Transport Commission (OTC) Municipal Waste Combustor
(MWC) Stakeholder Meeting
March 8, 2022

The OTC Stationary and Area Sources (SAS) Committee will hold an online meeting for MWC stakeholders from 10:30 AM – 12:00 PM ET on Tuesday, March 8, 2022. During the online meeting, the OTC SAS Committee will provide an overview of stakeholder comments received on a recent OTC study of MWC oxides of nitrogen (NOx) emissions in the Ozone Transport Region and the potential to further reduce ground-level ozone precursor emissions from MWCs. The comments were received during two prior OTC MWC stakeholder meetings and as a follow-up to those meetings. The study can be accessed [here](#). The SAS Committee is seeking input from stakeholders on the OTC study and planned efforts to develop an OTC Memorandum of Understanding on additional MWC emissions control measures.

To register for the online meeting, please use this [link](#).

We value stakeholders' input and comments and hope you will take this online opportunity to share your information and perspectives with the OTC SAS Committee. The "floor" will be open for stakeholder questions and comments during scheduled discussion periods; please feel free to share your thoughts. Prior to the March 8th meeting, we will distribute a summary of comments received during the MWC stakeholder meetings held on December 14, 2021 and January 19, 2022 along with comments received in writing following those meetings. The summary will include the SAS Committee's responses to comments. Any comments received during the March 8th meeting will be publicly posted.

Thank you for your interest and we look forward to your participation.
