

# Ipswitch IMail Server

Messaging *without compromise*

IPSWITCH™

[www.ipswitch.com](http://www.ipswitch.com)

*IMail Server is an affordable messaging system that includes all the capabilities you and your users need in an easy-to-run package.*

Like the telephone and electrical power, e-mail is a vital utility for nearly every organization. Yet low-end products lack important features and safeguards, and the complexity of expensive solutions like Microsoft Exchange challenges even the most experienced administrators.

Fortunately there is an affordable solution that 60 million users count on worldwide for their e-mail: IMail Server from Ipswitch. Reliable, versatile – easy to get running and keep running – IMail Server is a stable, time-tested product from a company focused on bringing the benefits of technology to organizations everywhere.

IMail Server is the ideal e-mail system for business, education and government – any organization that needs high-value, low-maintenance messaging. It's also the most economical, hassle-free way for consultants, integrators, and application service providers to host full-featured e-mail for their customers.

*Across industries, one conclusion:  
IMail Server is messaging done right.*

"The choice to purchase IMail came down to its ease-of-use and the competitive pricing model. We really liked the flexibility that an unlimited number of users license gave our business."

Tony Yustein,  
CEO of Softcom, which supports 35,000 customers through myhosting.com™ and mail2web.com™

"Very simple to setup, very easy to manage – great support and price. We love it!"

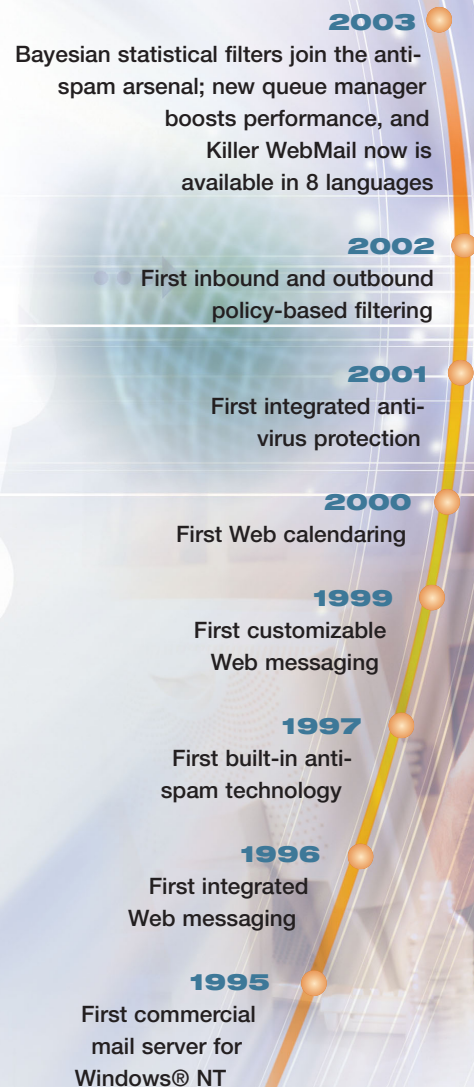

Joseph Frasier  
IT Director, 4th Circuit Public Defender Office  
Jacksonville, Florida

"We evaluated a number of mail servers including Microsoft Exchange but found them to be very time consuming. IMail was very easy to install and use. Many of our teachers and students were immediately sending e-mail."

Al Lau  
IS Director, Boston Public Schools

## A history of innovation

IMail Server pioneered many innovations in its rise to become the market-leading standalone messaging system for Windows®, including the revolutionary idea of making e-mail *affordable*:

## Everything you need for high-performance messaging

IMail Server combines all essential messaging capabilities with outstanding service and support:

- Send and receive e-mail using any standards-based client such as Microsoft Outlook, Outlook Express, Netscape Messenger, Eudora, or Pegasus
- High-performance queue manager tracks temporarily unreachable addresses, keeping the network free of pointless retransmissions
- Built-in Web messaging lets users read and send e-mail from any location
- Customizable Killer WebMail web messaging available in a growing number of languages including Dutch, English, French, German, Japanese, Korean, Spanish, and Chinese

### Choose the IMail Server that's right for you

#### IMail Express

FREE starter edition lets 10 users share one domain (such as @yourcompany.com). Includes all standard capabilities except the list server. An optional annual service agreement may be purchased for unlimited support via e-mail and phone.

#### IMail Small Business

Hosts unlimited users, up to five domains, and 10 lists per server. Support via e-mail is free; phone support and upgrades are included in an optional annual service agreement.

#### IMail Professional

Serves unlimited users across any number of domains with unlimited lists. E-mail support is free; phone support and upgrades are included in an optional annual service agreement.

## Stops spam and viruses

Combat-ready anti-spam capabilities filter messages in more than a twenty ways, including verifying sender addresses, HTML filtering, and performing reverse DNS look-ups. IMail Server also incorporates Bayesian statistical filtering techniques that recognize spam's characteristic word patterns with highly accurate detection rates and uses Realtime Blackhole Lists (RBLs) to block mail from known spammers.

Optional IMail Anti-Virus scans every message with powerful tools from Symantec™ to help prevent viruses, worms, and Trojan horses from entering your network. Offered as an annual subscription service, IMail Anti-Virus uses Symantec's LiveUpdate™ technology to load new virus definitions without interrupting e-mail scans.

## Exceptionally easy to set-up and run

IMail Server is the full-featured e-mail solution that does not require a staff of experts to keep it running:

- Typically installs in 20 minutes
- Uses its own database, Windows NT/2000/ADS database, or integrates with any ODBC-compliant data store such as your client billing database
- Automatically restarts or sends alerts if service is interrupted
- Allows you to administer it yourself from any location or delegate your choice of administrative rights to others

## Built by messaging experts

For 12 years, award-winning Ipswitch products have been enabling Windows users to harness Internet resources. Recently, the company leveraged its messaging expertise by introducing secure instant messaging for the workplace.

The Ipswitch product family also includes WS\_FTP Pro and WS\_FTP Server for secure file transfers, and WhatsUp Gold, a multi-award-winning network management solution.
